VALENCE

Autonomous Luxury Commerce · SS26 Atelier

01 — MOTIVE

Why the platform exists

Luxury DTC demos often stop at a landing page. Carts reset, filters return zero rows, and images 404. VALENCE ships the full loop — catalog, PDP, checkout, account, admin seed — so a buyer can click through a credible atelier in one session.

54-SKU floor

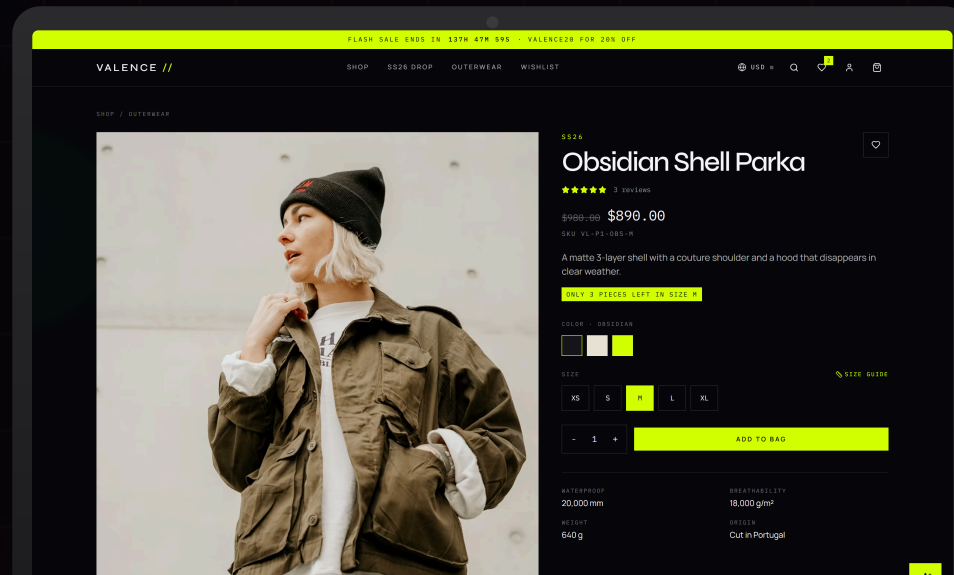

Obsidian Shell Parka (\$890), Voltage Knit Crew, Monolith Overcoat (\$1,180) — p1–p54 in catalog.ts + catalog-floor.ts, 9 categories, XS–XL variants.

Commerce state

Cart and wishlist in CommerceProvider with local persistence; orders and reviews persist to TiDB when configured.

One ops stack

Admin login, product visibility, order table, and POST /api/admin/seed — fed by sql/valance.sql on TiDB Cloud.

02 — WHY IT WAS BUILT

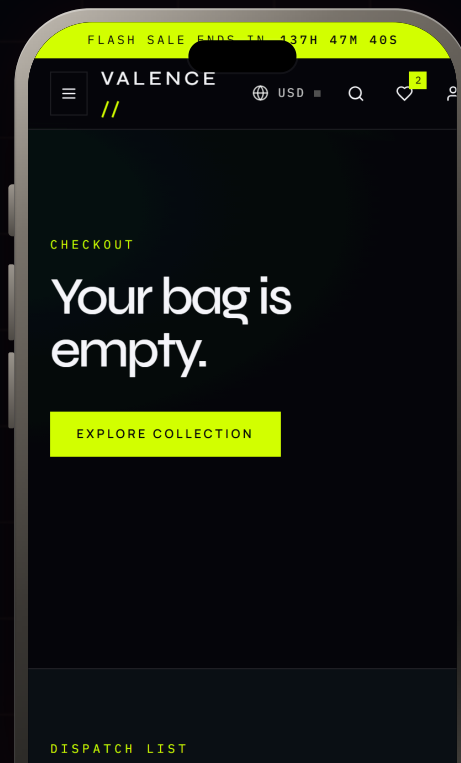

Market friction vs product response

FRICTION

- Missing max price param caps the shop at \$0–\$10 and looks “broken”
- Dead CDN photos collapse every card into the same error fallback
- Demo stores with no database lose orders on refresh

RESPONSE

- ShopExperience parses min/max only when present; default band \$0–\$2000
- npm run verify:images audits catalog URLs before ship
- DB_* + DB_SSL to TiDB; /api/health reports connected product count

VALENCE

Autonomous Luxury Commerce · SS26 Atelier

03 — BUSINESS VALUE

What a desk can do in the room

Pitch in one motion

Landing marquee, featured drops, and shop deep-links that preserve filter state for live walkthroughs.

Convert

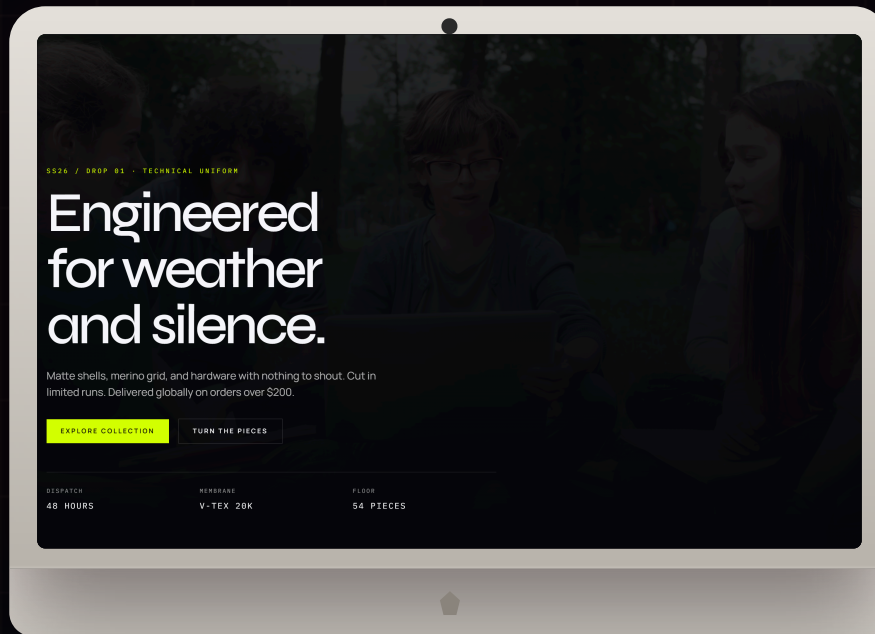

Cart drawer, checkout with address + coupon validation, invoice PDF hook, and order confirmation.

Retain

Account center, order history, wishlist share codes, and PDP reviews with fit advice.

Operate

Admin command center to seed TiDB, toggle visibility, and read the order pipeline.

VALENCE

Autonomous Luxury Commerce · SS26 Atelier

04 — OPERATOR JOURNEY

Land → browse → buy → return

- **Discover.** Cinematic landing with featured SKUs and flash drop banner.
- **Open the shop.** Category chips, price slider, search modal across titles and colors.
- **Configure PDP.** Size/color variants, gallery, fit reviews, AI stylist suggestions.
- **Checkout.** Stripe-ready flow, coupons, shipping tiers, orders to TiDB.
- **Export.** Account order detail and admin seed without leaving the brand.

Where the picture locks

Catalog lives in TypeScript for SSG, hydrates CommerceProvider, and syncs orders/reviews to TiDB. Image URLs are audited so the shop never regresses to broken thumbnails.

Catalog p1–p54

catalog.ts + catalog-floor.ts with mediaUrl and per-product ProductImage fallbacks.

Security

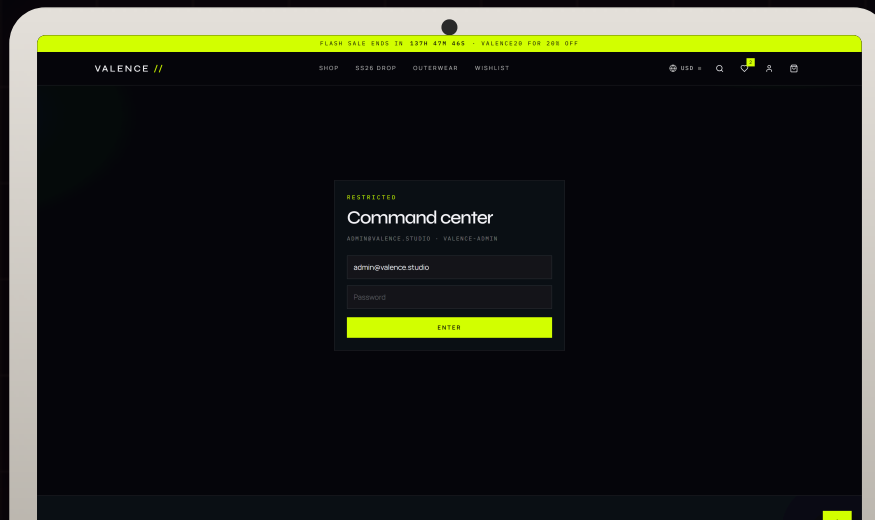

Middleware on /admin, JSON body limits, security headers, secure admin cookie in production.

Payments

Stripe PaymentIntent route with publishable key on checkout.

Health

/api/health reports connected mode and live product count from valance.

06 — FULL PICTURE

What VALENCE is — and why we built it

WHAT IT DOES

A production-grade luxury commerce demo: shop, PDP, cart, checkout, account, wishlist, admin, and optional AI stylist. Data layer supports in-memory fallback or TiDB/MySQL via sql/valance.sql.

WHY WE MADE IT

To prove autonomous commerce UX — matte brand, real filters, real images, database-backed orders — in one Next.js codebase deployable in minutes.

WHO IT IS FOR

Portfolio showcases, agency pitches, and engineers learning App Router + TiDB + Vercel production patterns.

WHAT SHIPPED

Next.js 14.2 · React 18 · Tailwind · Framer Motion · mysql2/pg · Stripe · sql/valance.sql · TiDB Cloud database valance · Vercel production · GitHub pirthvi-r12/valance-commerce · Demo users admin@valence.studio / avery@valence.studio.
